At Your Site, At Your Service

With a fleet of over 100 vehicles, mobile laboratories and widespread coverage across the African continent, Roadlab is your go-to partner for materials testing, no matter the location.

Roadlab is an accomplished and innovative supporter of South Africa's engineering and construction industries, meeting the needs of our nation's state enterprises, over 400 construction companies and more than 60 consulting firms with best-in-class service.

Roadlab has been a dominant service provider with a sound reputation for over 50 years, providing tailored materials testing solutions, geotechnical services and site investigations for construction, geotechnical, engineering and mining industries across the continent.

Our Blue-Chip and Industry-Leading Customers

Kusile Civil Works Joint Venture
Tau Pele Construction (Pty) Ltd
Raubex Construction(Pty) Ltd
Jodan Construction (Pty) Ltd
Nordex Energy SA (Pty) Ltd

Supporting Projects Across Africa

Our thirteen nationwide branches are supported by a large number of on-site laboratories, enabling us to rapidly respond to clients' needs and maintain strong business relationships.

Our technical expertise and experience across 21 countries has served private construction companies, national and regional governments, major banks and consultancies, road agencies, toll consortiums, local municipalities and state enterprises.

Local Branches

Our Technical Excellence Keeps Us Above Our Competitors

Our materials testing, geotechnical and investigative services are accredited by and correspond to a wide range of standards, including but not limited to those below.

Complete Materials Insight

Roadlab provides its clients with economical and practical recommendations for the testing of concrete, soil, gravel, aggregate, asphalt, bitumen, chemical and more, enabling the compliance and success of their road-building, mining and construction projects.

Cutting Edge Material Science

Our machines and methods are best-in-class, so we can deliver results you can trust on the widest range of subjects. This includes but is not limited to the following tests:

Soil & Gravel

- Maximum Dry Density & Optimum Moisture Content
- Moisture Density Relationship - Neat / Stabilized
- California Bearing Ratio & Swell - MDD and OMC
- Classification or Compliance of Soils & Gravels
- Insitu & In-field Bearing Capacity Testing
- Density Determination - In-field Testing
- Drilling, Sampling and Chemical Testing
- Stabilised / Treated Material Tests
- Particle Size Distribution

Aggregate

- Classification, Compliance of Soils & Gravels
- Mechanical Interlocking & Particle Shape
- Strength & Durability
- Sampling / Crushing
- Density & Chemical

Concrete

- Compressive Strength
- Flexural Strength
- Concrete Pavers
- Concrete Coring
- Sampling

Asphalt & Bitumen

- Laboratory Testing
- In-field Testing
- Field Sampling

Chemical testing

- Water Testing
- Soil & gravel
- Aggregate

Materials Testing

Equipped For Excellence

Roadlab's promise is to provide the most accurate, reliable and trusted service.

In pursuit of this high professional standard we maintain a comprehensive testing capacity and diverse inventory of equipment and site-testing vehicles, allowing us to continue fulfilling our clients' requirements with passion, accuracy and excellence.

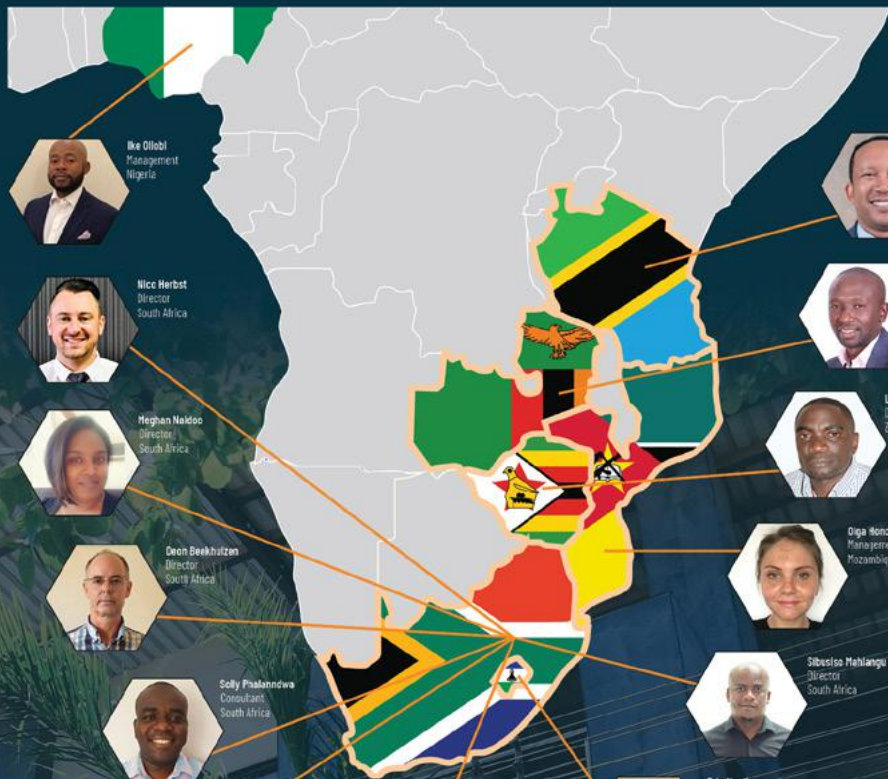

Specialized Equipment

- Dynamic Probe Super Heavy, a rig designed for compaction control and soil investigation to provide a measure of the in-situ strength of various materials.
- International Roughness Index measuring systems, used to determine the roughness index most commonly obtained from measured longitudinal road profiles.
- Model Mobile Load Simulator, an accelerated pavement testing tool applying realistic rolling wheel contact stresses.
- Hamburg Wheel-Track Devices, used to make rutting, fatigue, moisture susceptibility and stripping predictions.
- Falling Weight Deflectometers, used to evaluate the structural capacity of pavement.
